Subject: Stage 2 O-Train Trillium Line Project Call for Comments

Hello,

The current extension is great and would drastically reduce congestion for those that work downtown from Riverside South. The current plan is good but it could be improved by extending an extra 1.5 km west from the last currently planned Limebank station. This would make accessibility of the train significantly better with the currently existing Riverside South neighbourhood. The current plan to have a dedicated bus road can easily accommodate train tracks instead going into Riverside South. Not only would this significantly increase ridership among the residents of Riverside South, it would also bring in extra tax income for the city due to the increased value of existing homes in that neighbourhood. It would also future proof for additional development and even potential extensions into Barrhaven through Riverside South. The benefits of simply extending the stage 2 LRT line by 1.5 kilometers would make a dramatic and noticeable improvement to current plans, both now and for the future.

Thank You,
Abir
